## WORK EXPERIENCE

---

### Developer at Anthem

September 2019 – Present

- Implemented and refactored current extract, transform, and load functions for data migration into parallel processing using T-SQL. Resulted in 50% faster processing time
- Worked in an agile approach with a team of 11 people, developers, testers, and a scrum master

## EDUCATION

---

Bachelor of Science in Computer Science  
Virginia Commonwealth University, Richmond, VA

Graduated: May 2019

## SKILLS

---

Programming Languages: JavaScript, Java, HTML, CSS  
Frameworks: NodeJS, React, Bootstrap  
Database: MySQL, Mongo  
Version Control: Git

## PROJECTS

---

### Envera Health Virtual Agent Chatbot

Spring 2019

- Work with a team of 2 peers using an agile approach to develop an intelligent chatbot
- Chatbot schedules an appointment for a user without human intervention through a phone call
- Utilizes AWS services like Amazon Lex, Connect, Lambda, and Relational Database Service
- Incorporates a database that stores customers and doctor's information using MySQL

### Full Stack Contact Website

Winter 2019

- Created a RESTful web application with NodeJS to handle HTTP protocols and React for user interface
- Contains protected routes which can only be accessed with authentication by JSON Web Token
- Use React Hooks and Context API for state management
- Incorporates MongoDB that stores contacts that are unique to each user
- Deployed and managed through a cloud platform called Heroku

### Chat Room Web Application

Winter 2019

- Created a Websocket web application which allows a two-way communication between client and server
- A real time application that allows multiple users to communicate with each other
- Deployed the server on Heroku and hosted the site on Netlify
- Made using NodeJS, React, and CSS
